Award-winning game designer and professor Jeremy Gibson Bond has spent more than a decade teaching game design and building great games. In that time, his most successful students have been those who combine knowledge of three critical disciplines: game design theory, rapid iterative prototyping, and practical programming. In this book, Bond distills the most important aspects of all three disciplines into one place. Part I: Game Design and Paper Prototyping • The Layered Tetrad framework: a synthesis of 50 years of game design theory • Proven practices for brainstorming and refining game designs through the iterative process of design • Methods and tools to manage game projects and small teams • Processes to make playtesting and feedback easier Part II: Digital Prototyping with Unity and C# • Chapters that guide you through learning C# the right way • Instruction that takes you from no prior programming knowledge through object-oriented programming • Deep exploration of Unity, today's most popular game engine on both macOS and Windows • Methods for understanding and debugging code issues you encounter Part III: Game Prototype Examples and Tutorials • In-depth tutorials for seven different game prototypes, including a simple action game, a space shooter, a solitaire card game, a word game, and a top-down adventure • Instructions to compile these games for PC, web, or any of the dozens of other release platforms supported by Unity • Improved structure and layout that makes the steps of each tutorial easier to follow • A completely new Dungeon Delver prototype not present in the first edition

VERBAI ReACTIONS are a new form of word scrambles with a chemical flavor. You don't need to know any science to be able to solve VERBAI ReACTIONS puzzles, but the puzzles bear a resemblance to chemical reactions. EXAMPLE: Here is a sample: Es + 2 S + P + Si + 2 O + N --> _ _ _ _ _ . This VERBAI ReACTION is a word scramble consisting of one Es, two S's, one P, one Si, two O's, and one N. That is, the word scramble contains the elements Es, S, S, P, Si, O, O, and N. Unscramble these elements to form an 8-symbol word (that's why there are 8 blanks in the puzzle). ANSWER: For this puzzle, the answer is P O S S Es Si O N (possession). These VERBAI ReACTIONS resemble chemical reactions in two ways. First, the scrambled elements appear added together on the left of the reaction with coefficients (like the number 2 in the puzzle above) telling you how many of each element the solution contains, and you fill in the result of the VERBAI ReACTION by rearranging the elements and writing them on the blanks on the right side of the reaction. Secondly, all of the solutions are chemical words. A chemical word is a word that can be made using symbols from the periodic table. For example, the chemical word POSSESIION is made using the symbols for phosphorus (P), oxygen (O), sulfur (S), Einsteinium (Es), silicon (Si), and nitrogen (N). You don't need to be familiar with the periodic table to solve these problems; nor do you need to know any chemistry. You just need to be able to count and unscramble elements to make words. This 'Easy' volume consists of words with 4 to 5 symbols, which involves familiarity with common 4 to 10 letter words. Other 'Medium' and 'Hard' volumes consist of longer words. A unique feature of this book is that there is a Hints section at the back separate from the Answers section, for puzzlers who may be stuck and want to check just the first letter of the solution. MORE EXAMPLES: (1) S + Ni + Ge + U --> _ _ _ _ _ . (2) 2 C + N + 2 I + P --> _ _ _ _ _ . (3) Ti + C + Cr + P + Y --> _ _ _ _ _ . (4) 2 C + U + 2 S + Es --> _ _ _ _ _ . You can find the answers below. Note that this easy volume consists of chemical words with 4 to 5 symbols. We recommend starting with our easy puzzles before tackling the medium or hard puzzles (available in separate volumes). ANSWERS: (1) GeNIUS (2) PICNIC (3) CrYPTIC (4) SUCCEsS.
